

Mean RBC Hgb Content (CH)

The standard deviation (SD) of CH is 0.944 pg. Mean CH is lower in males by -0.177 SD, but the difference is not significant ($p = 0.017$, FWER = 0.119). CH is significantly ($p = 6.86 \times 10^{-6}$, FWER = 8.23×10^{-5}) affected by age, changing at a rate of -0.0429 SD per month. The effect of age on CH differs significantly by sex ($p = 1.41 \times 10^{-6}$, FWER = 8.32×10^{-8}). In females CH changes with age at a rate of -0.0251 SD per month, and in males it changes at a rate of -0.0609 SD per month.
